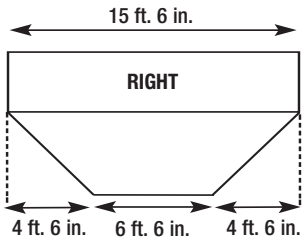
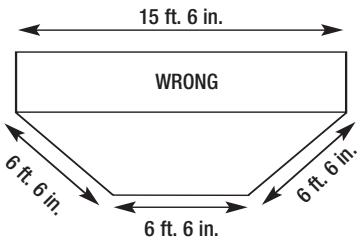
Are you measuring the bottom of your pool correctly?

Be sure you are **NOT** measuring the slopes when taking horizontal bottom measurements. We only use measurements parallel to the deck. See the diagrams below for the correct way to measure a coved bottom.





5 POOL SHAPE

Check one & fill In the measurements below:

NOTE: Diagonal measurements must be taken to imaginary squared off corners of your pool if you have radius or cutoff corners. (i.e. diagonal measurement Q & R on the rectangular pool)

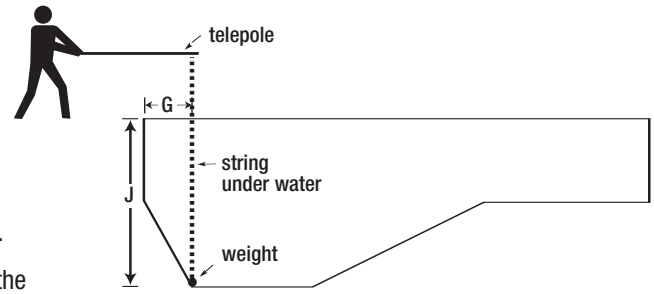
HELPFUL HINTS

Measuring the pool bottom without entering the pool:
You will be able to make horizontal measurements of you pool bottom without entering the pool. Taking these measurements is easier than you may think, when you use this easy-to-make measuring tool.

You will need:

1. A long straight pole (telepole) – "fishing pole"
2. String attached to one end of the pole
3. Some sort of weight tied to the other end of the string
4. A measuring tape



Follow the instructions below, using your fishing pole, to make these measurements.

Horizontal Bottom Measurements: Use your "fishing pole" to "fish" for a point on the bottom of the pool. With the pole to the ends of the pool and the string vertical (allow no slack in the string), measure the distance from the edge of the pool (water's edge) to the end of the pole where string is attached. You should "fish" for points that will achieve the desired measurements based on the bottom contour of your pool (pictured on page 1).

For example, to take measurement (H), you would stand on one side of the pool, and "fish" for a corner of the Hopper. You would then measure the distance from the edge of the pool (water's edge) to the end of the pole where the string is attached.

Depth measurements: When taking the depth measurements (C) and (J), be sure to measure from the bottom of the pool floor to the bead receiver (for beaded liners) OR to the board where the liner is nailed or stapled (for overlap liners). Do **not** measure to the top of the pool if you have a bead receiver, your measurement will be incorrect.
